

nCrypted Cloud EU to attend Reinsurance Rendez-Vous in Monte Carlo

nCrypted Cloud will meet with key companies and individuals at the International Rendez-Vous of Insurers, Reinsurers, Brokers and Reinsurance Consultants in Monte Carlo.

London, September 9, 2014 – Members of [nCrypted Cloud](#)'s EU team will be attending this year's international and informal Reinsurance congress in Monte Carlo. The Rendez-Vous de Septembre, held this year between 13th and 18th September, brings together the major players in the world Reinsurance markets in Monte-Carlo, including reinsurers, insurers and brokers. It allows all the participants to meet together to discuss matters which concern international insurance and reinsurance markets. It also marks the beginning of the annual negotiation process prior to the renewal of reinsurance treaties and, finally, it encourages high level contacts which often lead to strategic alliances.

nCrypted Cloud is the secure collaboration application that seamlessly integrates with leading cloud storage services such as Box, Dropbox, Egnyte, Google Drive and OneDrive. It allows individuals to securely share and collaborate in the cloud, while enterprises gain better manageability over sensitive data with advanced forensic auditing, remote wipe, and access controls. nCrypted Cloud's EU presence was announced back in early August of this year, and members of the management team will be attending the conference to meet with existing and new contacts.

Insurance companies are adopting nCrypted Cloud to securely collaborate on case files using the leading cloud storage services, meet backup requirements and provide a disaster recovery solution, as well as address other industry regulatory requirements.

"Attending this congress is an exciting prospect. We are delighted to be able to be a part of what is a long-standing and very significant event in a market we are already making an impact upon," said Dennis Allan, nCrypted Cloud EU's Founding Partner. "As a team we are familiar with the market, but it's rare to find so many of the key players together in one small, but very beautiful place."

Monte Carlo was originally chosen as the conference venue and has remained so for more than fifty years. It was chosen in part as it is a neutral country with no local insurance company, and it can provide its guests with extensive, high-quality hotel facilities, all within a relatively small area. As a result, it is possible for participants to walk to appointments, and to gather daily for their meetings, conferences, seminars and cocktail parties. Monte Carlo is located near Nice international airport, with air links to most major capital cities. Finally, the Principality is one of the safest areas in the world!

nCrypted Cloud EU is looking forward to taking part in this world-class and world-renowned congress, and welcomes participants to get in touch in advance to arrange a meeting. Please contact louise.ohara@ncryptedcloud.com for more information.

More information about the Rendezvous is available at <http://www.rvs-monte-carlo.com/>.
